

**Your Cataract Surgery was approximately one week ago.**

There are some changes to your medications that are written below.

**From this Visit:**

**Throw out bottle number 1 : Chlorsig**

**Continue to use bottle number 2: Prednefrin Forte four times daily until your**  
**Next Appointment**

**You can:** Resume every day activities – you can wash your hair but **do not submerge** your  
**Head** under water in the bath, swimming pool, the sea or freshwater.

Ask your doctor about recommencing work, driving, recreational and sporting activities.

You can watch television and read as desired. You can use sunglasses for glare.

Your prescription glasses will not damage your eyes if you use them but they may not be of any use after you have had a lens implant.

Your eye may take 4-6 weeks to heal.

New glasses will not be prescribed until your eye has healed.

Your vision may not stabilize for 4- 6 weeks post operatively.

You may feel a gritty, foreign body sensation or dryness from the surgical wounds intermittently

You can use topical lubricants to relieve these symptoms. This usually improves after 2 months.
